Introduction

Financial inclusion and financial health are cornerstones for international development. An inclusive and healthy financial system benefits all participants—individuals have greater and more flexible access to vital financial services; entrepreneurship is encouraged; banks are enabled to diversify their customer base and their portfolios of services/products, enhance their corporate brand, reputation and NPS (Net Promoter Score). A country with strong financial inclusion and financial health also has positive impacts for governments and the wider economy. **Good financial health enables quality of life, with people and communities able to comfortably meet daily costs without concern, manage unexpected financial shocks and be prepared for the future.** Good financial inclusion and financial health encourages financial planning, enabling an increased sense of security and control.

Without intervention, financial exclusion and a lack of robust financial health limit individuals' access to economic opportunities, create and perpetuate inequalities, increase individual exposure to significant risks and economic insecurity. Adults may be “unbanked” or “underbanked” for reasons including unaffordability, inaccessibility, lack of awareness of financial services, low quality, financial illiteracy or incapability, or underlying economic and social inequalities that reduce their income and wealth. As well as adequate access to and usage of financial services and products, individuals and entrepreneurs need the awareness, skills, and motivation to utilize their financial resources in the most efficient way in present times and in the future. Inequalities have become even more evident during the Covid-19 pandemic which has disproportionately impacted people who are vulnerable and belong to certain groups with protected characteristics.

Banks with ambitious targets for financial inclusion and/or financial health can drive positive outcomes for individuals, entrepreneurs, the whole society and the wider economy.

This guidance supports signatory banks in their efforts to set targets for financial inclusion and financial health, in line with the requirements of the Principles for Responsible Banking (for further information please refer to www.unepfi.org/banking/bankingprinciples). By taking a systemic approach to financial inclusion and health and by working with partners and stakeholders to achieve these targets, **banks can lead and enable significant positive impacts for millions of people across the world.**

Using this guide, **banks can understand how to align their core business with the Sustainable Development Goals (SDGs), including SDG 1 (No Poverty), SDG 5 (Gender Equality), SDG 8 (Decent Work and Economic Growth), SDG 9 (Industry, Innovation and Infrastructure), SDG 10 (Reduced inequalities) and SDG 17 (Partnerships for the Goals).** This guidance outlines the key steps for setting targets to drive increasing economic and social inclusion, followed by two illustrative examples of targets in financial inclusion and financial health.

This guidance was developed jointly by a working group of banking signatories of the Principles for Responsible Banking, the United Nations Environmental Programme – Finance Initiative (UNEP FI) Secretariat, with support from Leigh Smyth, a global consultant in social and digital inclusion.

Banks can create shared value for their different stakeholders by developing products and services, expanding their customer base, addressing individuals' needs more specifically and improving their business models.

Framework for financial inclusion and financial health

In consideration of various definitions, the working group defined financial inclusion as follows. **Financial inclusion is about democratizing financial services and “leaving no-one behind.”** This means all individuals, micro and small enterprises should have the option to access banking products and services (accounts, transactions, payments, savings, credit, digital services and insurance) via different and accessible channels (ATMs, internet banking, branches, desktop and mobile devices), which are affordable and effective (designed for all users, and actively and consistently used). Financial products and services should be designed and offered in a responsible manner by financial institutions.

Financial health is broader than financial inclusion. **Financial health (or well-being) is a state in which a person or organization can smoothly manage their current financial obligations and have confidence in their financial future.**¹ This includes four elements:

- Day-to-day – smooth short-term finances to meet short term needs
- Resilience – absorb financial shocks
- Goals – reach future goals
- Confidence – feel secure and in control of finances

The Framework (Figure 1) has been designed to ensure that all banks, regardless of geography, can consider and understand the opportunities to drive improved financial inclusion and financial health. It is crucial to understand the key components and the areas of potential focus that can enable improved outcomes to democratize financial services for individuals, entrepreneurs, and organizations, especially those who are considered vulnerable and/or with protected characteristics (refer to Appendix D for vulnerability and equality).

¹ Definition provided by UNSGSA – United Nations Secretary-General’s Special Advocate for inclusive finance and for development – that recently launched a Financial Health working group with leaders from financial and development sectors

Financial health or financial well-being

Financial inclusion

- Bank account access
- Digital inclusion
- Multi-channel access
- Effective access

- Day-to-day finances
- Financial resilience
- Future goals
- Confidence, security and control of finances

Financial education and digital skills

Focusing on vulnerability and equality

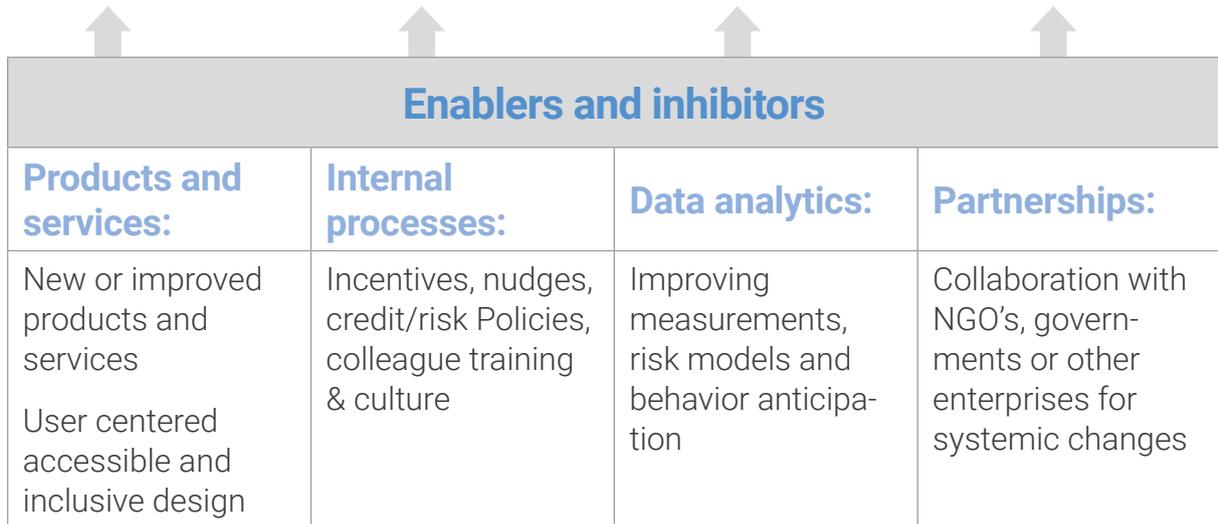

Figure 1: Framework for financial inclusion and financial health

To set and deliver on targets for financial inclusion and financial health, banks need to recognize, and influence, the wider eco-system of regulations, products, services, and culture in which the bank operates to reflect the world and work holistically for their customers and communities. It is important to understand the enablers that drive positive impact and the inhibitors to be addressed to avoid or reduce any (potential) negative impacts. By engaging with partners and stakeholders, evaluating data, identifying existing initiatives and potential gaps, the bank can understand the role it can play and accordingly identify its priorities.

Operational process for setting targets

This section suggests an operational process for setting targets. Banks should be guided by Principles for Responsible Banking requirements (detailed below) and follow the five steps below. In this section your bank will ascertain how to put each step into practice and how this translates into targets in two illustrative examples outlined in section 4.

- 1 **Understand** your bank's country context and national policies
- 2 **Set baselines and identity priorities** (based on country context and the bank's starting point)
- 3 **Set SMART targets**
- 4 **Determine measures and actions**
- 5 **Define key performance indicators**

Requirements of the Principles for Responsible Banking for Setting targets

In accordance with the Principles for Responsible Banking requirements for target setting, your bank's targets should:

- Be Specific, Measurable, Achievable, Relevant and Time-bound (SMART).
- Address an area of most significant impact resulting from your bank's activities and provision of products and services, as identified through your bank's impact analysis.
- Link to and drive alignment with, and greater contribution to, appropriate Sustainable Development Goals, the goals of the Paris Climate Agreement, and other relevant international, national or regional frameworks, as such as national public policies.
- Be set against a baseline, which is developed by your bank and assessed against a particular year.
- Include the identification, acknowledgment of significant (potential) negative impacts of the set targets on other dimensions of the SDG/climate change/society's goals, and steps to mitigate these should be taken as far as feasible to maximize the net positive impact of the target.
- Include defined actions and milestones to meet the target.

- Include definitions of key performance indicators (KPIs) to measure and monitor progress against the targets (any changes in these definitions, and any rebasing of baselines should be transparent).

Step 1: Understand your bank's country context and national policies

Your bank should first identify which national, regional and/or intra-national policy goals and targets are relevant for the purpose of setting financial access and financial health targets. Country goals may be found in National Development Plans, National Financial Inclusion Strategies (where applicable for your country), or other policy documents.² Resources from the World Bank and Central Bank databases can help your bank determine national priorities. For example, the [World Bank Global Findex Database 2017](#) provides data about financial inclusion utilising nationally representative surveys, which can help your bank understand its country context.³

The Maya Declaration could be a source for banks to identify their country policies and commitments on financial inclusion. There are more than 70 countries with targets towards achieving their nations' financial inclusion agenda.⁴

Financial health and wellbeing strategies can also be found at a countrywide level. One example is the UK Financial Wellbeing strategy. It recognizes that poor financial wellbeing affects millions of people in the UK, having negative consequences for social inclusion and the wider economy. The strategy was developed as a ten-year framework to help achieve the vision of everyone making the most of their money and pensions. In collaboration with stakeholders across the UK, the Financial Wellbeing strategy set targets, for example: 2 million fewer people using credit for food and bills; 5 million more people understanding enough to plan for the future.⁵

The state of financial inclusion and financial health

The last decade has seen some improvements. The Global Findex Database (World Bank) reports a global average of 69% of adults with bank accounts in 2017, compared to 51% in 2011.

2 Note that the UNEP FI Portfolio Impact Analysis Tools has an in-built Country needs assessment

3 <https://databank.worldbank.org/reports.aspx?source=g20-basic-set-of-financial-inclusion-indicators>

4 <https://www.afi-global.org/global-voice/maya-declaration/>

5 <https://moneyandpensionservice.org.uk/wp-content/uploads/2020/01/UK-Strategy-for-Financial-Wellbeing-2020-2030-Money-and-Pensions-Service.pdf> .

To gain a high-level understanding of financial inclusion and financial health from a global perspective, the working group analyzed a select set of indicators from the Global Findex Database (World Bank) in the countries their banks operate in. Data from 18 countries⁶ was analyzed and demonstrated that access to bank accounts differs widely among the analyzed countries. For example, more than 99% of individuals in countries like Norway, Canada and New Zealand have bank accounts as opposed to other countries like Ghana, the Dominican Republic and Colombia with less than 50% of individuals having access to bank accounts, and where less than 15% percent of the population is saving for old age. When we look at financial resilience, 54% of adults can cover expenses in case of unexpected emergencies; however, this varies significantly by country.

Furthermore, the data suggests differences linked to gender, economic status/wealth, location and education. Women, the lower-income population, people living in rural areas as well as people with only primary education tend to be more excluded from accessing financial products and services and tend to be in a less stable financial situation overall. This is also applicable for countries with better access to banking services, and thus, highlights the importance of having targets particularly for vulnerable people and those with protected characteristics.

More information can be obtained from Appendix A which includes a list of country level indicators, split in different categories, and sources to obtain data for the countries your bank operates in. In Appendix B, you can find additional resources available to understand your bank's country context and national policies.

Step 2: Set baselines and identify priorities (based on country context and the bank's starting point)

After understanding your country context, the next step would be to reflect this against your bank's internal transactional data and specific surveys (where available) to set baselines and identify priorities.⁷

Establishing baselines is critical to determine the starting point against which your bank can set its target, to identify priorities, and to monitor progress along the years. Baselines will also help tailor the bank's long-term strategy to increase positive, and decrease negative, impacts.

6 Norway, Spain, Canada, France, New Zealand, Brazil, Russia, Turkey, Ecuador, Dominican Republic, South Africa, Ghana, Kenya, Ireland, Colombia, United Kingdom, Costa Rica and Thailand

7 Note that the KPI list is integrated directly in the UNEP FI Portfolio Impact Analysis Tools to support the process of prioritisation

Your bank should understand what quantifiable metrics are already available, what the critical metrics are that will be required to measure from the starting point, which data your bank should therefore start to collect in case not all relevant data is available at this point, and accordingly establish baselines against a specific year.

It is possible and encouraged to utilize representative transactional data or to run specific surveys to set baselines, which can also enable your bank to understand gaps, client needs or your current performance in relation to national priorities. Potential indicators for establishing baselines can be found in Appendix C.

Banks should also disaggregate data for vulnerable groups. For example: financial services for individuals living in rural areas/specific geographic regions; loans by gender, ethnicity and low level of education; over-indebted clients or; individuals with low levels of financial health (for further details refer to Appendix D). Your bank may find it difficult to disaggregate data for some specific vulnerable groups because of data gaps, in which case setting a baseline can be complemented by other local data, research from other providers as well as partner surveys. As your bank's data management system improves over time with regard to disaggregated data by vulnerable and within customer groups, your baseline can be improved accordingly.

There are new evolving methodologies and approaches to measure customer's financial health and some banks are already conducting surveys combined with transactional data.⁸ Appendix B provides some frameworks to measure financial health and Appendix E provides examples of practical application by banks.

Step 3: Set SMART targets

Your bank will need to set a SMART target taking the country context and its baseline into account.

Targets need to be ambitious, and your bank needs to be clear about how its targets contribute to SDGs, national goals, priorities and/or national targets. A SMART target is:

- S** Specific
- M** Measurable
- A** Achievable
- R** Relevant
- T** Time-bound

It will be vital to assess whether the achievement of the target will, or could, result in any significant negative impacts, and to put measures in place to monitor whether negative impacts do materialize. A good reference for identifying potential negative impacts of targets is banks' impact analysis—this may include details of impacts you should be

⁸ UNSGSA has a working group to develop financial health measurements which could be used in the future. There are some references provided by the Financial Health Network (<https://finhealthnetwork.org/score/>) and the Center for Financial Inclusion (<https://content.centerforfinancialinclusion.org/wp-content/uploads/sites/2/2017/03/FinHealthGlobal-FINAL.2017.04.11.pdf>)

aware of, and for which your bank periodically screens. For example, your impact analysis probably identified over-indebtedness as an impact topic associated with providing credit. Therefore your bank would acknowledge this, screen for it, and, in the event that it materializes as a significant negative impact, integrate appropriate mechanisms to mitigate it.

Step 4: Determine measures and actions

This step refers to determining measures, actions and milestones to achieve your targets.

Examples of measures and actions your bank can set include:

Products and services:

- Improve or develop new products and services targeting and designing for vulnerable customer groups and groups with protected characteristics as standard.
- Establish free-of-charge accounts for specific vulnerable groups.
- Develop digital solutions and digital apps designed in consideration of specific needs e.g., disabilities. (Banks should be aware of the risk when offering standardized digital solutions that could lead to further exclusion. Financial institutions should find ways to improve digital access, motivation and skills. Banks should also mitigate the risk of bias in the implementation of artificial intelligence and algorithms design.)
- Set up entrepreneur platforms or digital solutions to engage rural areas or under-banked groups e.g., women and microentrepreneurs.
- Develop financial and/or digital skills education programmes, financial and digital tool-kits and advisory services as a preventive measure to avoid over-indebtedness and to support people in taking control of their financial health.
- Offer financial advisory services for over-indebted individuals.

Improving internal processes:

- Improve credit and risk policies to mitigate over-indebtedness e.g., risk models to screen early signs of over-indebtedness, behavior and income assumptions, appetite risk by vulnerable groups.
- Incorporate nudges in internet banking platforms e.g., opt in/opt out options for pension funds, low-cost credit lines, warning for overdraft protection, just in time warnings.
- Develop or refine financial consumer protection policies and initiatives e.g., responsible marketing, responsible lending, understandable language, no misleading advertisements.

- Improve remuneration strategies and policies to promote financial inclusion and financial health of customers e.g., incentivising long-term customer relationships and financial inclusion of customers that are less profitable in the short run rather than incentivizing short-term sales targets and provisions.

One enabler for achieving your targets could be to invest in staff training, cultural and internal programs to improve financial health of employees. Employees with a healthier financial life may be able to design improved products and services for clients' needs and lead to a more engaged, productive workforce.

Data analytics:

- Improve data capture (including disaggregated data), and run data analytics to understand behaviors of different groups.
- Improve risk models and behavior anticipation with transactional and/or survey data.
- Review risk of discrimination or bias in service offerings, particularly through the use of algorithmic decision making, and mitigate identified risks through appropriate internal processes.
- Work and collaborate with different partners across sectors to obtain missing data e.g., utility companies, debt registers, governments, academia, NGOs.

External engagement and partnerships:

- Collaborate with NGOs, governments, fintech's or other enterprises and banks for innovative initiatives and systemic changes.
- Set up partnerships with academia, think tanks or global networks to develop and improve methodologies to measure financial health.
- Advocate for public policies for financial inclusion and financial health.
- Collective effort for stewardship and/or policy engagement.

Your measures and actions could be designed internally and/or by taking a collaborative approach through engaging with partners, customers, clients and external stakeholders. Including external stakeholders could contribute to understanding the needs of your customers and can lead to more innovative and more successful solutions. Collaborative actions may ensure markets are fair and inclusive, especially for consumers in vulnerable circumstances and those with protected characteristics.

Step 5: Define Key Performance Indicators

After setting targets and determining measures and actions to achieve them, your bank should define KPIs to monitor progress towards target achievement. Banks can define both quantitative and qualitative indicators (refer to Appendix C for potential KPIs).

Examples of targets

Two examples of targets illustrate the steps of target setting: one for a financial inclusion target and another for financial health. If both impact topics apply to your bank, you could combine these targets.⁹

Illustrative example for Financial Inclusion:

Defined SMART target

By 2025

- Increase the percentage of bank accounts held by low-income customers by 46% (achieving 30% of the total consumer banking accounts), and business clients that are microentrepreneurs by 40% (achieving 20% of SMEs accounts)
- Raise the use of digital services (actively and consistently used) by 25%
- Increase loan allocation for individuals and microentrepreneurs by 20% each, disbursing USD 300 bn on loans for low-income clients and microentrepreneurs (2020–2025); and substantially decrease the level of over-indebtedness for low-income customers and microentrepreneurs.
- Engage and train 10 million individuals in financial and digital education programmes, in partnership with other institutions across sectors.

The bank's target aligns with SDGs 1 (No poverty), 8 (Decent work and economic growth) and 9 (Industry, innovation and infrastructure) and the country's National Financial Inclusion Strategy (if applicable).

This target is aligned with the goals in our National Financial Inclusion Strategy which aims to increase access to bank accounts and responsible credit for low-income population and microenterprises by 2025. The target aims to increase economic participation in our economy, thereby reducing poverty and ensuring that men and women, in particular those in the low-income segment, have equal access to economic resources through financial services and mobile solutions, as envisaged by SDG target 1.4. It also drives alignment with SDG targets 8.3, 8.10 and 9.3 by increasing access to affordable bank accounts and responsible credit for micro-enterprises, therefore supporting their growth.

⁹ Please note that there are overlaps with the impact area Gender Equality, in case your bank has identified women as a vulnerable customer group to focus on and set financial inclusion and health targets for. In this case you can get more information in the Gender Equality Target Setting Guidance Document

We particularly seek to increase the number of bank accounts held by low-income customers and micro-enterprises by 40% and 30% respectively, and work towards increasing the proportion of loans in our retail portfolio by 20% for low-income customers and micro-enterprises each. We are responding to the challenges and needs of our country of operation, taking into account the proportion of unbanked and underbanked population, as well as our baseline. In addition, our target could facilitate the creation of decent work and contribute to economic growth, by supporting entrepreneurship and encouraging the formalization and growth of enterprises.

This example focused on low-income customers, but a similar rationale can be applied for other vulnerable groups and/or groups with protected characteristics. It is crucial that banks also monitor significant negative impacts and unintended consequences that may result from its targets. It is important to take a holistic approach and understand the underlying inhibitors and enablers, in order to mitigate the potential negative impacts identified.

Refer to Appendix E for examples on financial inclusion.

	STEP 1: Understand country context	STEP 2: Set baselines and priorities	STEP 3: Set SMART Targets	STEP 4: Determine measures and actions	STEP 5: Define KPIs
	In the country the bank operates in, there is a considerable financial inclusion gap:	Internally, the bank identified the following regarding its clients (in 2020):	The bank's formulated SMART Target (by 2025):	The bank engaged with relevant internal and external stakeholders to develop a plan to reach its targets by 2025. The plan defined the following measures, actions and KPIs:	
Banking access (the bank should consider the number and percentage of low-income population and microentrepreneurs in the country in accordance to national definitions)	40% of the country's population can be considered low-income and 50% of adults do not have a banking account	20% of our banking accounts are from low-income customers	Increase the percentage of bank accounts held by low-income customers by 46% (achieving 30% of the total consumer banking accounts), and business clients that are microentrepreneurs by 40% (achieving 20% of SMEs accounts) by 2025.	Develop a communications strategy, including a digital campaign, to reach potential low-income customers and microentrepreneurs to inform and encourage them to open a bank account.	Percentage of low-income customers' banking accounts versus total customers' banking accounts, increase by 8% per year (including mobile accounts, fee free accounts and virtual wallets)
	There are 2.5 millions SMEs in the country of which 90% are microenterprises and 30% do not have a banking account	15% of our business accounts are from microentrepreneurs		Launch fee-free digital accounts and virtual wallets.	Percentage of microentrepreneur accounts versus total SMEs banking accounts per year, increase by 6% per year (including mobile accounts, fee-free accounts and virtual wallets)

	STEP 1: Understand country context	STEP 2: Set baselines and priorities	STEP 3: Set SMART Targets	STEP 4: Determine measures and actions	STEP 5: Define KPIs
Effective access	40% of low-income individuals in the country have access to credit and of those, 30% are over-indebted	15% of our loan allocation focuses on low-income customers whose over-indebtedness is 40% higher compared to the total individual customer base	Increase loan allocation for individuals and micro-entrepreneurs by 20% each, disbursing USD 300bn on loans for low-income clients and microentrepreneurs (2020–2025); and substantially decrease the level of over-indebtedness for low-income customers and microentrepreneurs, by 2025.	Improve or adapt credit/risk policies for credit lines for low-income customers and micro-entrepreneurs in order to increase access and avoid over-indebtedness (e.g. risk models, behavior and income assumptions, remove biases and increase flexibility where feasible, integrate early warning indicators to advice customers and clients)	Volume of loans for low-income customers and microentrepreneurs per year, including recurrence of use of products), increase by around 4% per year. Disburse approx. USD 60bn per year for both categories.
	70% of microentrepreneurs don't have access to credit	10% of our loan allocation focuses on micro-entrepreneurs whose over-indebtedness is 30% higher compared to the total SMEs customer base		Provide free financial advisory services for low-income customers and microentrepreneurs through digital platforms and external partnerships to address and minimize instances of over-indebtedness amongst customers	

	STEP 1: Understand country context	STEP 2: Set baselines and priorities	STEP 3: Set SMART Targets	STEP 4: Determine measures and actions	STEP 5: Define KPIs
Digital access	70% of the population has access to internet connection and digital services	60% of low-income customers and 40% of microentrepreneurs use the bank's digital tools for transactions (a 20% lower rate compared to total customer and SMEs clients base, respectively)	Raise the use of digital services (actively and consistently used) by 25%	Broadly communicate available digital services by utilising appropriate social media and engagement strategies; improve digital skills and services via external partnerships	Percentage of low-income customers and microentrepreneurs that use digital services for their day-to-day expenses, increase by approx. 5–10% per year
Enabler: Financial and digital education	<p>50% of the adult population do not have financial literacy and digital skills</p> <p>The country has a National Financial Inclusion Strategy, with a goal of ensuring that 20 million have access to a bank account and responsible credit by 2025, and to substantially increase access to finance for micro-enterprises during the same period.</p>	The bank already offers a financial inclusion program for customers and non customers for 10k individuals per year	Engage and train 10 million individuals in financial and digital education programmes, in partnership with other institutions across sectors.	Pursue partnerships with governments and/or NGOs to promote financial education and digital skills for low-income individuals and microentrepreneurs (customers and non-customers).	2 million customers and non-customers engaged in financial education and digital skills programmes per year. An impact analysis will be carried out in a three-year cycle.

Illustrative example for Financial Health:

Defined SMART target

By 2025

- Decrease the regular use of overdraft and over-indebtedness of the vulnerable group (who display a low level of financial security and elderly customers (+60)) by 30%.
- Work with customers from vulnerable groups (who display a low level of financial security and elderly customers (+60)) in order to increase the percentage of customers with recurrent savings, minimum emergency funds and long-term saving plans by 25%.
- Engage 10 million individuals in financial and digital education programmes, in partnership with other institutions across sectors.

A number of banks are already developing methodologies to measure customers' financial health and may include specific targets for that.¹⁰ For example, some financial institutions utilize scales based on surveys (self-reported behavior) versus internal transactional data (observed behavior) in order to classify customers in defined groups; other banks conduct surveys to understand customers' behaviors and financial situations.

This target aligns with SDG 8 (Decent work and economic growth) and 10 (Reduced inequalities) as well as the respective country's National Financial Well-Being Strategy (if applicable).

Our country provides a National Financial Health Strategy which aims to increase the number of individuals (including vulnerable customers and those with protected characteristics) saving their financial resources by 2 million, and individuals understanding concepts of financial planning by 5 million in the long term (by 2030). The strategy thereby supports reduction of inequalities and fosters increased resilience and inclusion, particularly for vulnerable groups and those with protected characteristics.

With our target, the bank can support reduction of inequalities envisaged by SDG target 10.2 by providing affordable and personalized financial savings products and financial advice to progressively contribute to the financial health of individuals in a vulnerable or disadvantaged situation. We will specifically set a target to increase the percentage of recurrent savings, minimum emergency funds and long-term plans from customers classified as vulnerable groups and those with protected characteristics, by 25% until 2025. The bank commits to improve access to financial services and to reduce overdraft and over-indebtedness in vulnerable groups (who display a low level of financial security and with elderly customers (+60)) by 30% by 2025 (SDG target 8.10, 8.10.1, 8.10.2).

Refer to Appendix E for examples on financial health initiatives provided by banks.

¹⁰ UNSGSA has a working group to develop financial health measurements which could be used in the future. There are some references provided by the Financial Health Network (<https://finhealthnetwork.org/score/>) and the Center for Financial Inclusion (<https://content.centerforfinancialinclusion.org/wp-content/uploads/sites/2/2017/03/FinHealthGlobal-FINAL.2017.04.11.pdf>)

	STEP 1: Understand country context	STEP 2: Set baselines and priorities	STEP 3: Set SMART Targets	STEP 4: Determine measures and actions	STEP 5: Define KPIs
	In the country the bank operates in, there is a considerable financial health gap:	Internally, the bank identified the following regarding its clients (in 2020):	The bank's formulated SMART Target (by 2025):	The bank engaged with relevant internal and external stakeholders to develop a plan to reach its targets by 2025. The plan defined the following measures, actions and KPIs:	
Day-to-day finance	85% of the adult population in the country have a banking account/ access to financial services	20% of our customer base are considered vulnerable groups (who display a low level of financial security, elderly customers (+60), 50% utilize overdraft credit regularly which is 30% more compared to total customer base	Decrease the regular use of overdraft and over-indebtedness of the vulnerable group (who display a low level of financial security and elderly customers (+60) by 30% by 2025	Improve credit/risk policies to mitigate the adverse use of overdraft by customers who do not benefit from it	Percentage of customers (classified as being from a vulnerable group) using overdraft regularly, - decrease this percentage by 6% per year, and decrease over-indebtedness by 4% per year.
	25% of the population in the country regularly use overdraft 10% of the population is over-indebted	25% of the customers in the vulnerable group are over-indebt		Integrate early warning indicators to advise customers and clients (e.g. warnings for overdraft, over-indebtedness, etc.)	
	30% of the adult population have low level of financial security and elderly individuals are at the top of the list			Develop specific digital services for the vulnerable group that help to improve their financial situation (e.g. planning and budgeting tools, debt counselling)	

	STEP 1: Understand country context	STEP 2: Set baselines and priorities	STEP 3: Set SMART Targets	STEP 4: Determine measures and actions	STEP 5: Define KPIs
Financial resilience	Out of 10 individuals, only 5 have a savings/investment account. And from those, 40% have low volume of savings/investments. 20% of the population did not save money in the last year.	20% of customers can be classified as vulnerable groups (low level of financial security, elderly (+60)), of which 80% have low rates of medium and long-term savings and 35% do not have sufficient emergency funds.	Work with customers from vulnerable groups (who display a low level of financial security and elderly customers (+60)) in order to increase the percentage of customers with recurrent savings, minimum emergency funds ¹¹ and long-term saving plans by 25% by 2025.	Integrate easy tools, personalized insights and nudges in the internet banking and digital platform to incentivize recurrent savings and to enable customers to make better investment decisions (e.g. include OPT OUT for Pension Funds, instead of OPT IN, automatic saving products, just in time warnings for expenditures or investments, etc). ¹²	Number and volume of customers from the defined vulnerable groups with recurrent savings and having emergency funds - increase by 5% per year.

11 Financial planners may suggest 3–6 monthly salaries for emergency that should be applied on liquid investment products

12 Research at UK about the effectiveness of OPT OUT strategies on pension funds of large employers: https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/227039/opt-out-research-large-employers-ad_hoc.pdf

	STEP 1: Understand country context	STEP 2: Set baselines and priorities	STEP 3: Set SMART Targets	STEP 4: Determine measures and actions	STEP 5: Define KPIs
	80% of individuals from vulnerable groups (such as people with low levels of financial security and elderly (+60)) do not possess sufficient savings for the long-term and/or do not have enough emergency funds for unexpected expenditures			Roll out advisory services and counseling for financial health and long-term planning, using multiple channels, including contacting elderly target customers telephonically where necessary.	Number and volume of customers with low level of financial security with long term saving plans, increase by 5% per year.

	STEP 1: Understand country context	STEP 2: Set baselines and priorities	STEP 3: Set SMART Targets	STEP 4: Determine measures and actions	STEP 5: Define KPIs
Enabler: Financial education	<p>40% of the population of the country have limited financial knowledge and digital skills.</p> <p>There is a National Financial Wellbeing Strategy to have 2 million more people saving and 20 million more people understanding financial planning for the long term by 2030.</p>	We conducted a survey and 30% of customers stated that they have low levels of financial knowledge. This percentage is even higher for vulnerable groups.	Engage 10 million individuals in financial and digital education programmes, in partnership with other institutions across sectors by 2025.	Develop programmes in partnership with the government and/or NGOs to raise knowledge and improve behaviors for financial health covering four elements: promote day to day healthy financial behaviors, build resilience to absorb financial shocks, define future goals and promote confidence to control future finances. Priority group: elderly (+60) and groups with low level of financial security	2 million customers and non- customers engaged (elderly and low level of financial security groups) in these programmes by, with an impact analysis carried out in three-year cycles

Appendix B: Other resources to understand your country context

- More than 70 member countries of the **Alliance for Financial Inclusion** have set more than 800 concrete national financial inclusion targets under the framework of the [Maya Declaration Maya Declaration | Alliance for Financial Inclusion \(afi-global.org\)](https://afi-global.org/). These can be accessed on the AFI data portal, along with self-reported country progress updates. www.afi-dataportal.org. You can download their global resources of financial inclusion policies, regulations and outcomes built by policymakers for policymakers and the public.
- Country perspectives for **discrimination and vulnerable groups**:
<https://www.dlapiperintelligence.com/goingglobal/employment/index.html?t=09-discrimination>
- **Gap for SMEs**. It is possible to find reports that provide an overview, complementary to other sources:
<https://www.worldbank.org/en/topic/smefinance>
<https://www.oecd.org/cfe/smes/financing-smes-and-entrepreneurs-23065265.htm>
- You can also find how the **COVID-19 pandemic impacted the microfinance sector** at the global and regional levels: <https://www.cgap.org/pulse>

And a specific report about COVID-19 and women-led MSMEs in sub-Saharan Africa:

Appendix C: Potential KPIs to set baselines and targets

After understanding the country context, the following step requires reflection against your bank's internal transactional data and specific surveys (where available) in order to set baselines and identify priorities. Your bank should understand what quantifiable measures are available and establish baselines against a specific year. Here your bank can find some potential indicators for establishing baselines. Each KPI should be prioritized according to the respective country needs and your business strategy. For example, focus on the identified vulnerable customer groups relevant for your country.

We are providing an excel document in which you will find the potential KPIs to set baselines and targets to close the gaps you found in your country (non-exhaustive).

Access the Excel sheet here →

Appendix D: Vulnerability and equality

What do vulnerability and equality mean?

Vulnerability

The working group reviewed several approaches for the definition of vulnerability that are aligned with the [Financial Conduct Authority](#) in the UK. Customer vulnerability is when customers face personal circumstances which expose them to increased susceptibility to damage, harm or loss when interacting with financial institutions. Vulnerable groups need to be treated fairly and consistently across financial services sectors.

Vulnerability may result in consumers having additional or different needs and may limit their ability or willingness to make decisions and choices or to represent their own interests. These consumers may be at greater risk of harm, particularly if unexpected circumstances occur.

Banks should look to understand the nature and scale of characteristics of vulnerability that exist in their target market and customer base, its impacts and what types of harm or disadvantage their customers may be vulnerable to, from a financial perspective and how this might affect the consumer experience and outcomes. Once this is understood, your bank can measure the appropriate KPIs.

6 key drivers which may increase the risk of vulnerability.

- **Health** – physical and mental, disabilities or illnesses affecting the ability to carry out day-to-day tasks.
- **Life events** – major life events such as bereavement, job loss, (forced) migration, relationship breakdown, financial, mental and physical abuse. Also consider homeless people and former inmates.
- **Resilience** – low ability to withstand financial or emotional shocks.
- **Education and capability** – little knowledge of financial matters or low levels of financial education and confidence in managing money (financial capability) and low capability in other relevant areas such as literacy, or digital skills.
- **Digital and financial access** – low ability to access beneficial services and products.
- **Culture and demographics** – such as geographies or ethnic groups like travelling communities with less access to financial services.

Equality

Equality relates to the state of being equal, especially in status, rights, and opportunities. It is the fundamental right of different groups of people to receive the same treatment. Each country and even different jurisdictions within the same country may classify the protected characteristics (where these are protected from unlawful discrimination or harassment) differently. Examples include: gender, race, geography with less access to financial services, being a senior citizen (i.e., 80+) although the opposite would not be, being very young in age as this is associated with less experience. The goal of equity recognizes that some individuals may require additional support to be able to achieve financial inclusion.

Example vulnerable and/or inequal groups (groups with protected characteristics) to identify with your partners and in your portfolio.

- Migrant workers
- Low-income customers
- People without fixed address e.g., travelling population or people without homes.
- Low-income customers in rural areas (geographies with less access to financial services)
- Customers from ethnic minority groups
- Women
- People with mental or physical disabilities
- Elderly people
- Refugees
- Indigenous population
- Customers with primary education
- Microentrepreneurs with low access to credit
- Young adults
- People subject to certain life events (i.e., job loss, divorce, abuse)
- Personal characteristics linked to race and ethnic minority groups.

Appendix E: Examples of financial inclusion and financial health initiatives

Examples of how some banks (in the working group) are approaching financial inclusion:

Access Bank launched a new product to foster financial inclusion through digital access: <https://accessbankplc.com/ways-to-bank.aspx>

AIB has established a Vulnerable Customer Programme that aims to support customers in vulnerable circumstances and focuses on key areas such as Financial Abuse, Addiction, Dementia, Mental Health, Accessibility and Economic Resilience: <https://aib.ie/content/dam/frontdoor/personal/sustainability/aib-sustainability-report-2020.pdf#page=58> (p. 58)

Banco Pichincha has a strategy for microentrepreneurs, and they point out their credit figures and the evolution of their portfolio in the last four years: <https://www.pichincha.com/portal/Portals/0/Transparencia/English%20version%20MEMORIA%202020%20BP.pdf?ver=2021-03-25-120415-350> (pp. 81-86)

BMO launched their own “BMO for Women” program in support of women-owned businesses: <https://bmoforwomen.com/>

Bradesco launched the Micro individual Entrepreneur Website to offer trainings in different areas: www.mei.bradesco.

CaixaBank offers a social account in their product portfolio which is free of charges for those on “minimum vital income”: https://www.caixabank.com/deployedfiles/caixabank_com/Estaticos/PDFs/Accionista-sinversores/Informacion_economico_financiera/IGC_Eng_v30_2.pdf

Standard Bank Group developed a Joint Public-Private Efforts to Promote Financial Inclusion of women in Africa: https://www.standardbank.com/static_file/StandardBankGroup/filedownloads/Report-ToSociety.pdf

Vancity partnered with the Hua Foundation and Bảo Vệ Collective to offer resources and guidance for those who might face language barriers in applying for COVID financial relief packages:

https://www.vancity.com/SharedContent/documents/Covid_support/Vancity_Fact-Sheet_Covid_Government_Benefits_Central.pdf

Westpac provides an access and inclusion plan to foster financial inclusion:

<https://www.westpac.com.au/accessibility>

Examples of how some banks (in the Working Group) are approaching financial health:

ANZ (Australia) has an example to survey client's behavior

<https://www.anz.com/content/dam/anzcom/shareholder/ANZ-2020-ESG-Supplement.pdf> - Page 54

Bank of Ireland has developed an online financial wellbeing hub for personal as well as business clients:

<https://personalbanking.bankofireland.com/financial-wellbeing/>

<https://businessbanking.bankofireland.com/financial-wellbeing/>

BNZ provides comprehensive information for customers experiencing financial difficulty and engages in initiatives to support these customers e.g., combating predatory lending practices:

www.bnz.co.nz

Commonwealth Bank of Australia has developed a methodology to assess financial wellbeing.

https://www.commbank.com.au/content/dam/commbank-assets/banking/guidance/2018-06/using-survey-banking-data-to-measure-financial-wellbeing.pdf?ei=things_UniMelbPDF

ING has different strategies to promote financial health of customers.

<https://www.ing.com/Sustainability/Sustainability-direction/Financial-health.htm>

Lloyds Bank uses a blend of transactional and survey data to understand levels of digital skills and capabilities

<https://www.lloydsbank.com/banking-with-us/whats-happening/consumer-digital-index.html>

NatWest provides a number of educational programmes for young adults, youth and children to familiarize themselves with basic money concepts. <https://natwest.mymoney-sense.com/students/students-5-8/>

United Nations Environment Programme Finance Initiative (UNEP FI) is a partnership between UNEP and the global financial sector to mobilize private sector finance for sustainable development. UNEP FI works with more than 350 members—banks, insurers, and investors—and over 100 supporting institutions— to help create a financial sector that serves people and planet while delivering positive impacts. We aim to inspire, inform and enable financial institutions to improve people’s quality of life without compromising that of future generations. By leveraging the UN’s role, UNEP FI accelerates sustainable finance.
